All water use/demand is in million gallons per day (mgd).

Commas have been added to figures for percent change, to assist with readability.

Totals shown may not be exact due to rounding.

\*Public supply water use is either new since 1995 or reported as less than 0.1 mgd in 1995.

Note: Public water supply utility service areas often include residences that derive their water supplies from privately owned (domestic self-supply) wells. Typically, these domestic self-supply water uses existed prior to their locations becoming part of public water supply service areas. For public water supply service areas, SJRWMD does not have sufficient information to separate the populations served by public supply systems from those served by domestic self-supply wells. Therefore, public water supply populations estimated by SJRWMD often include some domestic self-supply populations. Public supply populations reported by SJRWMD for 2005 are greater than for 1995, because many public supply service areas increased in size substantially from 1995 to 2005. Conversely, many domestic self-supply populations and water use estimates reported from 2005 are lower than for 1995.
